A Display Emails (Inbox) `IN`

    A1 List of emails
    A2 List of conversations
    A3 Inbox partitioned into campaigns (current GmailValet inbox for each campaign)
    A4 Spreadsheet view
    A5 Template tree

B Visual Conversation State (Individual) `IN`

    B1 Breadcrumbs
    B2 Full thread (cf. expanded view in Gmail)
    B3 Thread w/ template names + template content
    B4 Thread w/ template names (template content collapsed)
    B5 Breadcrumbs w/ context information
    B6 Show last email + key/value form
    B7 Cross-campaign recipient history/information

C Extract information `IN`

    C1 Key/value form
    C2 Free text notes
    C3 Tags
    C4 Key/value pairs (spreadsheet)
    C5 Outline (cf. Taskpot)

D Select Template `OUT`

    D1 List of existing templates
    D2 List of existing templates (allow for use of multiple templates + modification)
    D3 Filtered list of templates (based on some heuristic, see example)
    D4 Tree of existing templates
    D5 List of previous replies
    D6 Filtered list of previous replies
    D7 D2 + allow for cross-campaign template selection
    D8 Templates sorted by relevance (campaign, conversation level, frequency of use)

E Personalization `OUT`

    E1 Placeholders w/ contact data
    E2 Placeholders w/ key/value pairs
    E3 Manual personalization (could be done by assistant)
    E4 Dynamic templates
    E5 History of personalized text
    E6 Placeholder w/ flow logic (like embedded Ruby)
